

Lead & Copper Rule for Water Supply Lines Survey

The USA EPA, in conjunction with KDHE, are requiring all Public Water Supply systems to conduct a Lead Service Line Inventory of both the public and privately owned water services within our jurisdiction. We would like to stress to you that the City of Ellis currently, and in the past, has had no lead issues within our water supply system.

We are sending out this survey in our efforts to obtain information about the privately owned (customer side) service lines within the system. *If the information cannot be gathered from the homeowner or business, KDHE may require the water supplier to excavate private water lines in order to identify them.* This would be very time consuming and expensive to do every private water service line in our community.

Please fill out this survey to the best of your knowledge. This information is crucial for us to complete our systems material evaluation. We greatly appreciate the members of our community that take time to participate in this important study. Please return this survey with your utility bill payment, drop off at City Hall in Clerk's Office or place in the night drop box. If you have any other questions, please contact John Leiker, Public Works Director, at 785-726-1741.

1. What is your street address? _____
2. What is your water service line material? Your water service line is the line running from the water meter into your house/business (often found entering house/business through basement wall, slab floor, or crawlspace).

- Copper pre-1982
